Labour Spokesperson for Energy

## 100% renewable electricity generation by 2030

- Labour will bring forward the target of 100 percent renewable electricity generation five years to 2025
- \$70m to accelerate a potential dry year storage solution, such as pumped hydro at Lake Onslow
- Accelerate electrification of transport and industrial sectors
- Further investing in emerging technologies, like green hydrogen, to position New Zealand as a global leader
- Continuing to make energy more affordable for all New Zealanders.

Labour will bring forward the goal of 100 percent renewable electricity generation by 5 years to 2030 and invest in technologies such as green hydrogen while continuing to make energy affordable for all New Zealanders.

“Labour is planning properly for New Zealand’s future energy needs. We need to take steps right now and also protecting jobs and industries. This policy does that,” Labour Leader Jacinda Ardern said.

“The COVID-19 economic recovery represents a once in a generation opportunity to reshape New Zealand’s economy.”

“Investment in renewable energy is also jobs rich. Our plan will be creating new jobs and develop the high-tech sector.”

“Labour’s Clean Energy Plan is a critical element of Labour’s wider COVID-19 recovery plan that will be a key part of our economic recovery.”
